# Paired Task 1. Object Oriented Analysis

STEP 1: Identify the possible object

OBJECT: Patient, Hospital Room, Tiny Hospital System

STEP 2: identify the properties and behavior

## PATIENT

*Properties*

Patient\_ID:

Name:

DateofBirth:

*Behavior*

Getdetails()

Updatedetails()

## HOSPITAL ROOM

*Properties*

Room number:

Room type(Private/Semi):

Room fee:

Occupied(True/False):

*Behavior*

Check Avail()

Assign Patient()

Released room()

### **TINY HOSPITAL SYSTEM**

*Properties*

Patients:

Room:

*Behavior*

Addpatient()

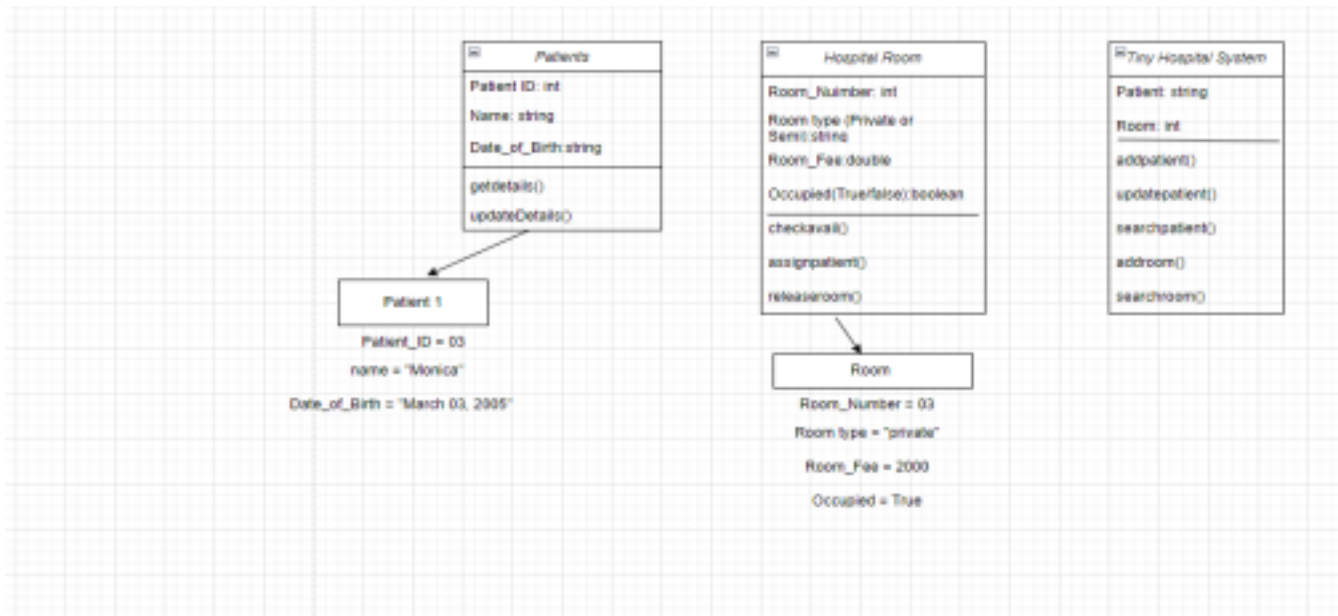

Updatepatient()

Searchpatient()

Addroom()

Searchroom()

### **STEP 3:**

#### STEP 4: Implementing using Java Code

```
public class Patients
```

```
{
    // instance variables
```

```
String patientID;
```

```
String name;
```

```
String dateOfBirth;
```

```
void getdetails() {}
```

```
void updatedetails {}
```

```
}
```

```
class ResidentPatient extends Patient {
```

```
    Hospital
```

```
}
```

```
public void Name()
```

```
{
```

```
    System.out.println("03" + id);
```

```
}
```

```

public void ID()
{
    System.out.println("Monica" + name); }

public void birth()
    System.out.println("March 03 2005" + dateofbirth); }

}

class Hospital Room
{
    // instance variables
    int roomnumber;
    String roomtype;
    double roomfee;
    boolean occupied;

    boolean checkavail() {
        return !occupied;

    }

    void assignPatient() {
        occupied = true;
    }

    void released() {
        occupied = false;
    }

}

class Tiny Hospital System
{
    // instance variables
    String patient;
    int room;
}

```

```
void assignPatient() {  
    void room;  
  
    {  
  
    }  
  
    public void patient  
        {  
            System.out.println("Monica" + id);  
        }  
}
```

```
public void room()  
{  
    System.out.println("03" + name); }  
}
```

```
public class patient  
{  
    public static void(String args[])  
    {  
        // Create an object named patient  
        patient = name();  
  
        patient.name = "Monica";  
        patient.id = "03";  
        patient.dateofbirth = "March 03 2005";  
        patient.room = "03";  
        patient.roomtype = "Private";  
        patient.roomfee = "2000";  
        patient.occupied = "True";  
    }  
}
```
